

Gruppo Trombini

The Company

Gruppo Trombini SpA is one of the main Italian producers of raw, faced and laminated chipboard panels, as well as impregnated paper, resins and edgings destined for use in the furniture industry. The Group began operating in the 60's under the management of Giacomo Trombini, with the Falco plant in Pomposa (Fe), the location which produces raw and faced panels and now spearheads our group in terms of technology and investments. In the 70's, the company opened the Rafal plant in Piangipane (Ra), whose production is focused on faced and laminated panels and which, in the course of the 80's, became a benchmark in the industry for innovation and creative research. In 1998 the Annovati plant in Frossasco (To) was acquired, an Italian firm with a longstanding tradition in the wood processing industry and finally, in 2003, the firm Raf in Montelabbate (Pu) also became part of the group to occupy an important role in the production of edgings.

Nowadays, Gruppo Trombini is in a position to offer customers a vast range of decorative effects and finishes, in order to satisfy aesthetic expectations, the dictates of current trends and the requirements of furniture producers and end users. The group is particularly oriented towards investment in research and development and is most attentive to the eco-quality of its products, as amply demonstrated by the high number of certifications obtained.

Gruppo Trombini and Progetti per il Mobile

Gruppo Trombini, which takes part for the first time in the contest, is investing considerably in research and development, with new workshops, plants and resources and is therefore particularly interested in making new contacts with the world of ideas, design and edge-cutting trends, as well as interfacing with schools and design institutes: the contest represents a great opportunity for getting to know students and/or professionals who are particularly interesting from a creative point of view.

Gruppo Trombini's briefing for the competition: "For the best development of a decoration and/or finish for a treated chipboard panel for the furniture industry and therefore for interior design (in particular kitchen furniture, interiors and exteriors, or kitchen walls). The finished design must focus on the aesthetics of the surfaces, which will be original in design, use innovative manufacturing/decorative or finish design processes, and be possible to manufacture". Therefore the focus is on the aesthetic function of the product, but the works will also have to show a high content of creativity, originality and innovation, for subsequent application in manufacturing processes. In a few words, Gruppo Trombini would like to discover young talents who, with their fresh, new ideas, may confer added value to the industry.
